

Celebrating 10 Years Of Thermage

This revolutionary anti-ageing machine has been helping women (and celebrities) look younger for the last decade. Here are 10 things you didn't know about Thermage:

1 This time it's different – the new Thermage CPT System leverages the proprietary Comfort Pulse Technology™ along with a **new vibrating handpiece** to enhance efficacy and greatly improve patient comfort.

2 Thermage CPT System has an improved and more uniform heating action that treats deep tissues in the skin and **simulate new collagen growth.**

3 Unlike lasers, Thermage® procedures **work on all skin types and colors.**

4

The Thermage CPT procedure is **effective for the face, eyes and body**. In fact, it can help tighten loose skin safely on most body parts including neck, tummy, arms, hands, thighs, knees and buttocks.

5

Thermage® is the **first and only** system to receive FDA clearance for non-invasive eyelid treatments, which can help smooth and tighten skin while reducing wrinkles and hooding in the eye area without surgery or injections, and of course, with little to no downtime.

6

According to London's Daily Mail, **Hollywood actress Demi Moore is reportedly hooked on Thermage**. She is said to be so thrilled with the results that she sometimes gets the treatment every week!

7

Oprah Winfrey is also a fan! Ever since the talk show queen began recommending the treatment, as far back as 2003 according to The New York Times, Thermage has gained a reputation **in Hollywood and beyond as the best non-surgical treatment** for getting younger-looking skin.

8

The Thermage Cellulite treatment uses radio frequency energy to stimulate collagen deep within the dermis causing an immediate and progressive "tightening" to occur. As new collagen forms, the hollows that create the dimpled effect are filled in, **resulting in a smoother, tighter silhouette**.

9

Only one treatment is required. If you like the results, you can have another one usually after 1.5 to 2 years.

10

Thermage has **treated more than one million patients** in 80 countries by 2,500+ physicians for the past 10 years!
